

WinServ SiteAudit Connector

We help you install the connector in your WinServ server environment and connect it to your SiteAudit installation. Data is seamlessly collected to automatically create consumable deliveries, service orders and more, using your WinServ business rules.

Device Import

Everytime a new managed device is connected it will automatically be imported as a service object in WinServ, using the tenant's WinServ customer id.

Meter Reading Based Invoicing

The connector collects meter readings from all your managed devices. No more meter cards and phone calls. Invoice are easily created based on the increase from the previous period.

Automated Consumable Deliveries

The connector automatically receives your SiteAudit alerts and creates supply orders based on your own WinServ business logic. Support for high yield/low yield consumable suggestions, over-delivery protection and service contract based pricing rules.

Automated Service Orders

Whenever a managed device alerts that field service is required, a new service order can be created automatically. Use WinServ's field dispatch functions to quickly have a technician on site, with minimum down-time for your customers.

Netaphor SiteAudit™

Award-winning **Netaphor SiteAudit™** tools enable partners with managed printer services (MPS) capabilities. Manage local and networked printers, wide format and scanners with analysis, alerting and reporting. From comprehensive meter and supplies tracking to service performance measures such as uptime percentage, SiteAudit tools provide advanced auditing and fleet management capabilities. Now use SiteAudit OnSite or SiteAudit Hosted (for cloud-based customers) with the WinServ SiteAudit Connector to handle your fleet management processes. Try SiteAudit today and visit www.netaphor.com
